JOURNAL OF CRYSTAL GROWTH

# Subject index

Adducts
– for aluminum gallium arsenide 152
– for gallium arsenide 127, 152
Aluminum
– antimonide 250, 310
– arsenide 50, 83
– gallium arsenide 11, 152, 230
– gallium antimonide 250
– gallium indium phosphide 306
– organic 11, 50, 152, 166, 235, 250
– phosphide 268
Apparatus
– for thin film growth
– – by gas source molecular beam epitaxy
– – – using microwave plasma source
– – – – of gallium nitride 361
– – by metalorganic molecular beam epitaxy
– – – using short pulse
– – – – of gallium arsenide 200
Arsenic
– organic 1, 78, 138, 162, 204

Computer simulation
– of ab initio study of molecular orbital calculations 94
– of metalorganic molecular beam epitaxy 83

Device characterization
– diodes 186, 230, 297, 355
– double heterostructures 1, 11, 221, 225, 230, 235, 246, 287
– electronic materials 11, 50, 138, 143, 166, 230, 261, 293
– lasers 42, 56, 64, 195, 210, 216, 225
– quantum wells 56, 64, 78, 173, 195, 225, 273, 278, 293, 297, 302, 306, 315, 355
– solar cells 29
– transistor 1, 11, 50, 221, 230, 235, 256, 261
Diodes, see Device characterization

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 37, 166, 256
– dry chemical 42

Gallium
– antimonide 250
– arsenide 37, 69, 99, 104, 109, 114, 127, 133, 138, 143, 152, 162, 191, 200, 204, 221, 230, 235, 241, 256, 261
– arsenide phosphide 282
– indium arsenide 18, 133, 225, 302
– indium arsenide phosphide 18, 210, 297
– indium phosphide 221, 261, 306
– nitride 37, 361
– organic 11, 18, 37, 50, 64, 69, 78, 89, 99, 104, 109, 127, 133, 138, 143, 148, 162, 166, 173, 186, 195, 200, 204, 210, 221, 225, 230, 235, 241, 246, 250, 256, 261, 273, 297, 302
– phosphide 89, 268

Indium
– aluminum arsenide 166
– antimonide 157
– arsenide 83, 157, 191, 278, 310
– arsenide phosphide 273
– gallium arsenide 1, 50, 69, 78, 109, 166, 186, 191, 195, 216, 225, 246, 287, 293, 302
– gallium arsenide phosphide 50, 56, 64, 148, 173, 195, 210, 246, 273, 297
– gallium phosphide 1, 11, 221, 261
– organic 18, 42, 64, 69, 78, 162, 166, 173, 179, 195, 210, 221, 225, 235, 246, 273, 278, 297, 302
– phosphide 18, 42, 50, 162, 166, 173, 179, 195, 278, 287, 293, 297

Kinetics
– of adsorption 322, 338
– of decomposition 338
– of growth 18, 69, 109, 118, 127, 133, 200, 204, 246, 315, 322, 338, 344, 371, 376
– of interface control 18, 118, 278, 287, 293, 310, 355
– of nucleation 18, 118

Lasers, see Device characterization

Nitrogen
– organic 361

Phosphorus
– organic 1, 162
Precursor
– for aluminum gallium arsenide 11, 152
– for gallium arsenide 69, 127, 133, 138, 152
– for indium gallium arsenide 1, 69, 78, 133
– for indium gallium arsenide phosphide 148
– for indium gallium phosphide 1, 11

Quantum wells, see Device characterization

Selenium
– organic 371

Silicon 322, 328, 333, 338, 344, 349
– germanium 315, 355
Solar cells, see Device characterization
Superlattices, multilayers
– of III–V compounds 18, 56, 210, 268, 273, 287, 293, 297, 302, 310
Surface structure
– of gallium arsenide 114
– of metalorganic molecular beam epitaxy interface 118
– of III–V compounds 18

Tellurium
– organic 256
Thin film growth, epitaxy
– by gas source molecular beam epitaxy
– – of aluminum antimonide 310
– – of aluminum gallium indium phosphide 306
– – of aluminum phosphide 268
– – of gallium arsenide phosphide 282
– – of gallium indium phosphide 306
– – of gallium nitride 361
– – of gallium phosphide 268
– – of indium arsenide 310
– – of indium gallium arsenide 216, 287
– – of indium phosphide 287
– – of silicon 322, 328, 333, 338, 344
– – of silicon germanium 315, 355
– – of zinc selenide 366
– by laser-assisted metalorganic molecular beam epitaxy
– – of indium gallium arsenide phosphide 273
– by metalorganic molecular beam epitaxy
– – of aluminum antimonide 250
– – of aluminum arsenide 50
– – of aluminum gallium antimonide 250
– – of aluminum gallium arsenide 11, 152
– – of gallium antimonide 250
– – of gallium arsenide 37, 69, 99, 104, 109, 114, 127, 133, 138, 143, 152, 162, 200, 221, 230, 235, 241, 256, 261
– – of gallium nitride 37
– – of gallium phosphide 89
– – of indium aluminum arsenide 166
– – of indium arsenide 278
– – of indium gallium arsenide 1, 50, 69, 78, 109, 133, 166, 186, 195, 225, 293, 302
– – of indium gallium arsenide phosphide 50, 56, 64, 148, 173, 195, 210, 246, 297
– – of indium gallium phosphide 1, 11, 221, 261
– – of indium phosphide 42, 50, 162, 166, 173, 179, 195, 278, 293, 297
– – of III–V compounds 18, 29
– – of zinc selenide 371, 376
– – theory of 69, 83, 109, 127
– – theory of precursor design 118
– by molecular beam epitaxy
– of gallium arsenide 114, 191
– – of indium gallium arsenide 191
– by solid source molecular beam epitaxy
– – of silicon germanium 355
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of silicon 349
– – through metalorganic vapor phase epitaxy
– – – of indium gallium arsenide phosphide 56
– – through plasma-assisted epitaxy
– – – of indium antimonide 157
– – – of indium arsenide 157
– – – of zinc selenide 157
Three–five (III–V) compounds 18, 83

Zinc
– organic 371, 376
– selenide 157, 366, 371, 376
